

Stage Trolley

Highly mobile plug-foot stage
for performers

You've never been able to set up your stage this quickly and conveniently. Its integrated castors allow you to transport your stage trolley simply anywhere. And with just a few actions when you get there, your professional stage is ready in no time. Isn't that practical?

New: Mobile stage trolley

Setting up a stage has never been so easy – ideal for small groups and bands

A finished stage in just a few steps:

1. As soon as you have unloaded your stage trolley you can pull it along comfortably behind you.
2. Then, when you reach your destination, just release the catch and unfold the stage trolley. The castors and the handle "disappear" underneath the stage frame.
3. Now plug the sturdy feet into the holders provided and fix them with the pins (see detailed illustration on right). We will also fit your stage trolley with our **new practical eccentric clamp** on request. This makes it even easier.

Ready! And the show can begin!

4. Disassembly is equally as fast by the way. Just fold everything together. The stage trolley **then locks automatically**.

Absolutely mobile

In the folded-up state the stage trolley has a **practical handle and sturdy castors**. These allow you to pull it along comfortably behind you and then set it up in no time on site.

The stage trolley at a glance

- Weight 21 kg with lightweight plate, surface in medium brown or black
- TÜV surface load capacity test with 500 kg/m²
- Useful surface area: 100 x 100 cm
- Available in heights 20, 40, 60 and 80 cm (alternatively with telescopic legs 40 - 60 cm or 60 - 100 cm)
- Stacking height: 19 cm

Flexibly extendable

You can extend your stage as required with **additional stage trolleys**. You can even add the stage trolley onto other existing stage elements. Accessories such as steps and railings provide even more options.

Fast, space-saving stacking

The stage trolley is extremely compact. When folded up it only takes up an area of 54 x 100 cm and is only 19 cm high. The castors and the handle simply fold inwards. A real advantage for transport and storage.

Here we show you how easy the assembly is.
